

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph at page 62, lines 10-16, as follows:

The obtained polymer had a relative viscosity of 2.25, a terminal amino group concentration of 27  $\mu\text{eq/g}$  and a terminal carboxyl group concentration of 35  $\mu\text{eq/g}$  (hereinafter, this polyamide 12 will be referred to as "(PA-3) polyamide 12" or simply as "(PA-3)"). Further,  $(\text{terminal amino group concentration})/(\text{terminal carboxyl group concentration}) = 0.77 > 1$   $0.77 < 1$ .
